

Employee Attrition Prediction – HR Summary

Project Objective:

The objective of this project was to analyze employee attrition patterns and identify the key factors that influence employees to leave the company. The findings can help the HR team take proactive steps to improve employee retention and reduce future attrition.

Key Findings

Area	Finding
Department with Highest Attrition	Sales
Job Role with Highest Attrition	Sales Representative
Most Important Factors	Monthly Income, Age, Overtime, Total Working Years
Employees Most at Risk	Employees with lower income, frequent overtime, and fewer years at the company
Recommended Focus	Career growth, workload management, employee engagement

The analysis shows that employee attrition is influenced by multiple workplace factors rather than a single reason. The Sales department experiences the highest attrition, and Sales Representatives leave the company more frequently than employees in other job roles. Monthly Income, Age, Overtime, and Total Working Years were identified as the most important factors related to employee attrition.

Although salary is an important factor, it is not the only reason employees leave. Work environment, job involvement, and employee satisfaction also contribute to attrition. These findings suggest that HR should focus on improving employee engagement, career development, and work-life balance.

HR Action Plan

Recommendation	Expected Benefit
Reduce excessive overtime and improve work-life balance	Lower employee turnover
Strengthen career development in the Sales department	Better employee retention
Conduct regular feedback and stay interviews	Identify employee concerns early
Review compensation and recognition policies	Improve employee satisfaction

Conclusion

This analysis provides useful insights that can help the HR team identify employees who may be at risk of leaving and take preventive action before attrition occurs. The results should be used together with manager feedback and employee discussions, as personal reasons and external opportunities are not included in the available data.
